RAISE YOUR GAME

Alpina's unique **single piece moulded carbon chassis** is integral – to the boot, to your foot and your entire ski experience. It's so thin and flexible it brings your foot closer than ever to the ski and the ground beneath it, for optimal contact, control and feel. Yet it's so light and strong it defies any elements that might hold you back, making the entire stroke cycle powerful, clean and efficient.

The world's lightest, most responsive ski boots are changing the way we ski - and win.

**ULTRA LIGHT CARBON CONSTRUCTION,
ULTRA HIGH PERFORMANCE**

The world's lightest, most responsive ski boots are changing the way we ski – and win.

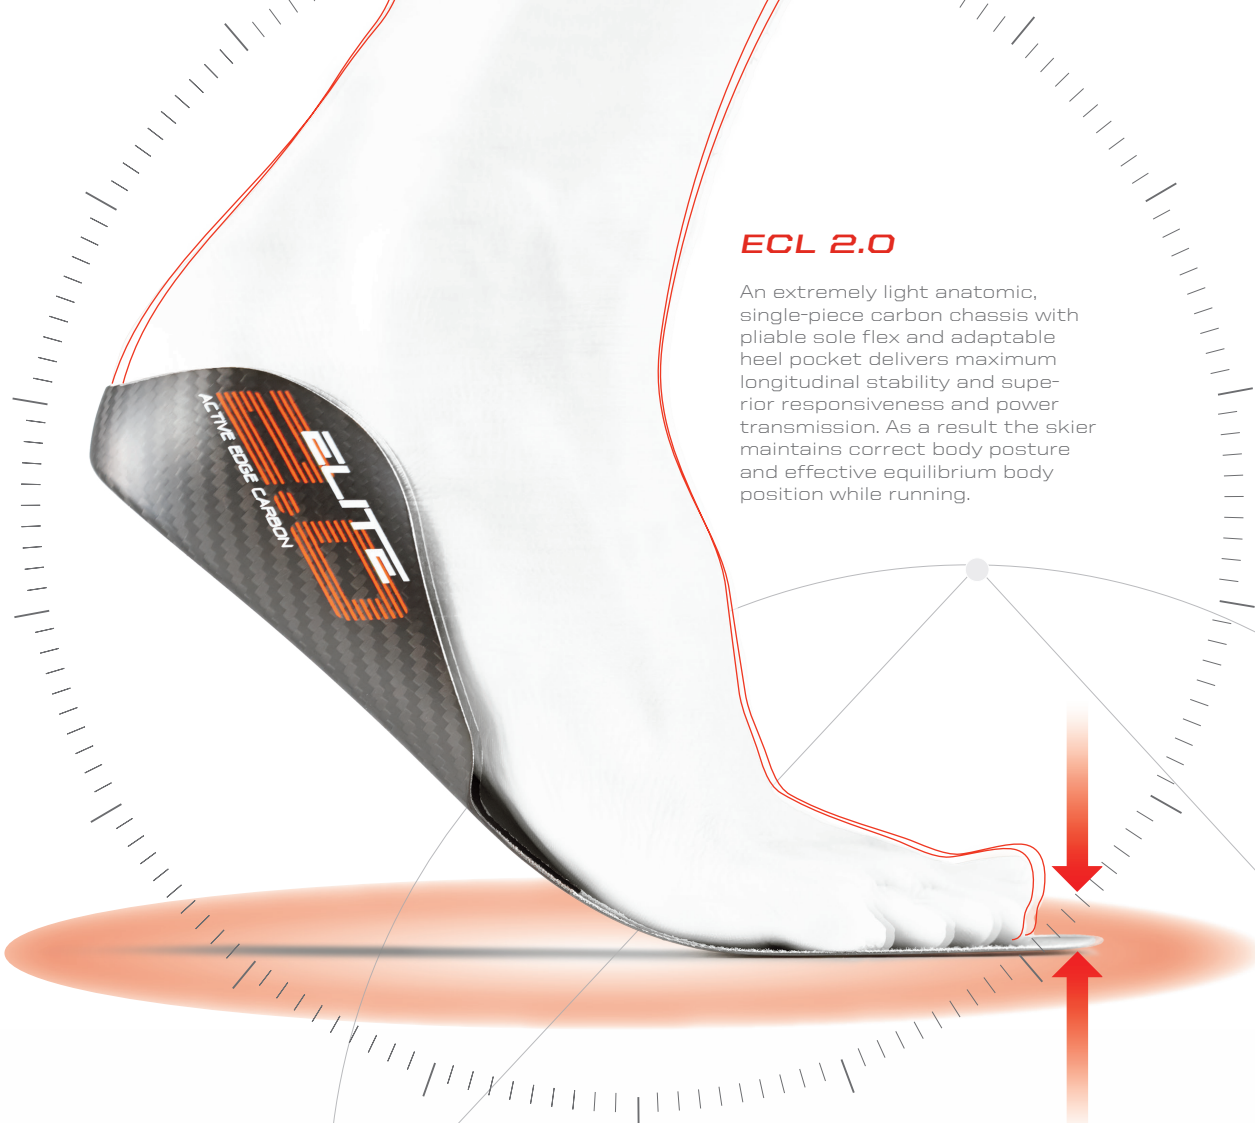

ESK 2.0

The single-piece all-carbon anatomic 'Active Edge' skate chassis features extremely light, 'hard' sole flex and delivers superior lateral responsiveness and maximum longitudinal stiffness and stability.

TORSIONAL STABILITY

Carbon cuff-to-heel counter hinge construction delivers ultralight, maximal stiffness, minimal rotational hinge friction and optimal ankle fit.

ECL 2.0

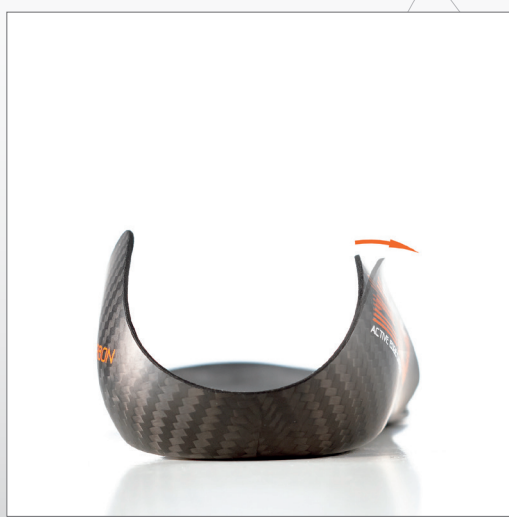

An extremely light anatomic, single-piece carbon chassis with pliable sole flex and adaptable heel pocket delivers maximum longitudinal stability and superior responsiveness and power transmission. As a result the skier maintains correct body posture and effective equilibrium body position while running.

ACTIVE EDGE

Active Edge consists of a special sandwich of inner and outer carbon textile layers combined around a rubber mid-layer for maximum chassis adaptability to various types of heels and heel shapes together with maximum power and total control.

FREE HEEL

Free Heel construction virtually eliminates heel stress, providing the skier maximum comfort.

ANATOMY OF INNOVATION

01 . LAST (RACE, SPORT, VIKING, TOURING, BC, WOMEN, JUNIOR)

Lasts for each type and category of shoe are developed according to the very specific functional requirements of the shoe and the desired level of comfort and grip. They are formed on the basis of experience, knowledge, skills and practices, and with the help of digital research (scanning) the large number of feet; they take into account the huge variety and diversity of shapes of feet (metatarsal volume and width, heel volume and curvature of the heel arch, a variety of shapes and positions of the bones of the ankle; height, size and curvature of the instep of the foot, etc.). Along with the design and shape of the internal 'soft' part of the shoe offering optimum grip so wide and narrow, as well as high and low forms of the feet..

*

02 . F1 INNER SHOE (CLASSIC)

low cut ('free flex' ankle zone), DRB construction ('free flex' metatarsal zone), soft padded low cut tongue (max. instep adaptability and fit), 90° Short Cut Txt-Hook Instep Lacing System (max. instep grip and 'free flex' metatarsal zone), Heel Pocket Silicon Spots Lining (max. heel grip), Forefoot Mesh Lining (soft and adaptable metatarsal flex), made out of Light Weight & Water Non absorbed Materials (weight control)

'DRB' construction = one-piece forefoot and tongue construction

03 . PREMIO INNER SHOE (SKATE)

mid-cut (max. ankle bone comfort), LCC construction, soft padded 3D Tongue (max. instep adaptability, fit and grip), 45° Long Cut Combi Lacing System (max. torsion stability, max. metatarsal foot adaptability and max. instep grip), Heel Pocket Silicon Spots Lining (max. heel grip), Forefoot ULTRADRY Lining (improved metatarsal stability and moisture transport), Auto Fit Foam Padded Inn Zone (to reduce and avoid inside side foot stress), made out of lightweight & water-resistant materials (weight control)

'LCC' construction = Long Cut Combi

04 . PREMIO ACTIVE EDGE CHASSIS (SKATE)

carbon-made, anatomic, toe & heel plate TPU made (thermoplastic polyurethane), 'Active Edge' heel counter; extremely light, 'hard' sole flex, toe plate NNN compatible, adaptable heel pocket, maximum longitudinal stiffness and lateral stability, superior responsiveness and power transmission by foot to the ski, effective equilibrium body position control and correct body posture control while running, optimal foot and ankle fit

chassis = one-piece sole and heel counter with integrated toe and heel plate

active edge = special sandwich (carbon textile inner and outer layers with rubber mid-layer) chassis structure for soft sole and heel, adaptable heel counter edges

05. F1 ACTIVE EDGE CHASSIS (CLASSIC)

carbon-made, anatomic, toe & heel plate TPU made (thermoplastic polyurethane), toe & heel plate directly integrated into chassis, 'Active Edge' heel counter, 'free heel' construction extremely light, 'soft' sole flex, toe plate NNN compatible, adaptable heel pocket, maximum chassis total weight reduction, maximum longitudinal stiffness stability, superior responsiveness and power transmission by foot to the ski, effective equilibrium body position control and correct body posture control while running, optimal foot and ankle fit, minimum heel stress

chassis = one-piece sole and heel counter with integrated toe and heel plate

active edge = special sandwich (carbon textile inner and outer layers with rubber mid-layer) chassis structure for soft sole and heel, adaptable heel counter edges

- 06. PREMIO CUFF (SKATE)

carbon, advanced screw & nut type cuff to heel counter hinge construction with Teflon foil, anatomic, EVA padded, power strap extremely light, maximal stiffness and lateral stability, superior lateral responsiveness, minimal rotational hinge friction, optimal ankle fit, superior comfort, adjustable ankle grip

- 07 . PRO CUFF

carbon, screw & nut type cuff to heel counter hinge construction, anatomic, EVA padded, power strap; light, maximal stiffness and lateral stability, superior lateral responsiveness, minimal rotational hinge friction, optimal ankle fit, superior comfort, adjustable ankle grip

- 08. ELITE CUFF

carbon, ergonomic, power strap; light, good stiffness and lateral stability, superior lateral responsiveness, optimal ankle fit, superior comfort, adjustable ankle grip

09 . SK CUFF

plastic, power strap; good stiffness and lateral stability, superior comfort, adjustable ankle grip

10. CMB CUFF

plastic, power strap; good stiffness and lateral stability, superior comfort, adjustable ankle grip

* Note: in the case of unsatisfactory grip due to individual specifics in the shape of the foot, there is an appropriate practical approaches with which it is possible to improve the grip of the shoe to the extent possible. In this case, it is necessary to contact the manufacturer directly.

11. GAITER

one-piece seamless, covers shoe and lower leg completely, water-tight, with water-tight zipper, elastic; protects against cold, water, moisture and snow, shoe instep adaptable to different foot shapes

12. GAITER BUILT-IN ELASTIC INSERT (SKATE)

for gaiter adaptability to various lower leg shapes

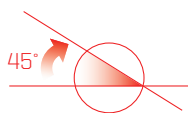

13. HEEL FIT ADJUSTMENT

Simply use the control handle to adjust the boot heel shape, which allows individual adjustment of the heel grip between the shoe and the heel, providing more comfort while running.

14. PLASTIC HEEL COUNTER

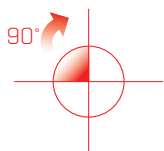

The plastic heel counter provides good grip and offers a stable foothold in the heel and prevents heel movement; also adapts to various foot shapes and heel volumes. Improves torsional stability of the shoe, thus ensuring better power transfer to the ski.

15. 45° LACING SYSTEM

A braid angle of 45° relative to the longitudinal direction of the shoe improves the torsional stability of the soft part of the shoe. This ensures a tight fit between the shoe and the foot in the rotation phase of the shoe toward the inner side when skiing the skating technique.

LS

16. 90° LACING SYSTEM

A braid angle of 90° relative to the longitudinal direction of the shoe provides maximum grip in the instep and ensures a tight fit between the boot and the heel when skiing the classical technique.

LS

17. TX-LOOP' LACING

The combination of laces and textile bands exploits the friction between lace and loop. This allows the efficient transfer of lacing forces through the entire foot and provides a strong yet comfortable grip between the shoe and the foot. Plus on-off is easy.

18. ANATOMIC FOOTBED

Insole contributes significantly to the vertical stability of the foot, providing a high level of comfort and improves the thermal insulation of the shoe.

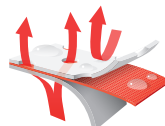

19. STIFF FLEX

The shoe design, together with component parts and materials provides a high degree of flexural rigidity, which delivers maximum power and control using the skating technique.

20. SOFT FLEX

The shoe design, together with component parts and materials provides a high degree of flexural rigidity, which delivers maximum power and control using the classical technique.

21. '4DRY' MATERIAL

'4DRY' composition (PVC materials and Sympatex membrane) makes the shoe water impermeable and at the same time allows it to breathe. Inside the shoe is impermeable to water and moisture; on the outside the shoe allows air and water vapour pass out of the shoe, so the shoe interior stays dry and warm, maximizing comfort.

22. 'ALPITEX' MEMBRANE

The Alpitex membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions.

23. 'THINSULATE' INSULATION

'Thinsulate' insulation provides up to twice as much thermal shoe insulation. Even under extremely cold and high-humidity conditions it provides the foot with maximum thermal comfort.

Move your binding for
increased performance

Alpina ski boots and the Rottefella Xcelerator binding

system offer some of the most innovative solutions in Nordic skiing. Both Alpina and Rottefella strive to deliver products that optimize every skier's experience, with the most comfortable and efficient products.

Rottefella's development philosophy is based on the body best utilising its full potential when in a neutral position. With the foot in as flat a position as possible - in the shoe and on the ski - the skier's hips are positioned further forward, making for greater balance and more thrust to the core musculature. Utilising the body's biodynamics to the full, giving greater power bursts and ultimately a much better and more exhilarating skiing experience.

Integrating Rottefella's philosophy and technology, we have developed the Xcelerator system for speed and precision in skiing offering a range of extras for optimal fine-tuning to the skier's personal style, including the Rottefella flex system which personalises the flex resistance of the bindings to the individual's style and shoe size.

Moving your heels down and hips forward, combined with straightened knees and arms closer to the body, gives you several benefits.

Invented in Norway

ROTFEFELLA®

POWERED BY YOU. TECHNOLOGY BY US.

The Xcelerator Pro Classic, a binding specially designed for classic cross-country skiing, based on the winning technology of the Xcelerator

system. And used by athletes and race enthusiasts.

Move your binding for increased performance. By moving the binding towards the back, you get better glide in classic skiing. Move the binding forward for better grip.

The NIS plate makes it possible to mount Rottefella bindings to your skis. The plate also makes it possible to move the binding forward and towards the back for increased performance.

Alpina's top model boots, ESK 2.0 and ECL 2.0, are designed with the best combination of function and weight in mind, and are the boots of choice when every gram counts.

The Xcelerator binding system gives you the optimal transmission of power from skier to ski, and provides great balance and control in every stride.
